

I am a truck driver and in the performance of my duties of ?moving commodities? from city to city safely and quickly.  
One thing that is very helpful when I am 300 miles away from a city is to have accurate and current weather reports. Which the AM and FM band can?t provide in most cases.

Traffic reports by AM/FM are often not reported fast enough and are inaccurate.

I pay for a service of accurate and instant and that is what I get.

Thank you XM
